

Nilex Asset Management

Nilex Asset Management system is a complete program for administering, organising and registering assets. It can handle from 100 up to 100 000 assets in a single- or network version. With a great number of additional modules the Nilex Asset Management system can grow with the need of the user. Together with the numerous modules Nilex Asset Management constitute an unbeatable combination of functionality and simplicity.

Nilex Asset Management is a complete system for the administration of assets. The system has been developed together with Nilex clients to meet real demands and practical problems. A lot of effort has been put into the application to make it easy to use and administer.

Authority and administration

Nilex Asset system has full control over each users' authority when accessing the system. The access rights can be set as detailed as for each data-field. Fields can be made available to one group of users and excluded to another.

Sorting, searching and selecting

It is important to be able to find the requested information quickly. To accomplish this, Nilex Asset system provides the user with the ability to add and sort any fields in the list view, as well as quickly adding filters. In addition, the selection-function gives the user the possibility of saving a cross-section of the database for easy viewing when needed. Naturally it is also possible to do a normal search for information in all available fields of the database.

Sub assets

Most assets have additional components that you may wish to register. To accommodate this, Nilex has created sub assets. Sub assets can be virtually anything.

Linked assets

Sometimes there is a need to linked assets to each other. The Linked Assets function allows you to create a survey about assets that belong together in both graphic and list form.

Document

The Nilex Asset system allows you to link documents to any asset. All file formats are supported. If the document is a picture file, you can preview the picture. The documents can be opened within the Nilex Asset system.

Supplier

Information about the supplier can be stored for any asset. Nilex Asset system provides the necessary information should guarantee commitments or reparations arise.

Other functions

Nilex Asset system has many more functions. The system can handle depreciation of asset values. It also has a very powerful import function for obtaining data. The report generator gives fast and correct information that can be put into customizable reports.

Modules

Nilex Asset system can be expanded and adapted to the special needs of any company.
