ProStrategy Deliver Real Value for Money

Every construction company is different and yet similar! ProStrategy take the time to understand your pains & work very closely with you to deliver real benefits. We have years of experience in delivering mission critical applications. Our team of financial accountants and skilled programmers, + our Microsoft Gold Partner Certification, underpin the resources necessary to implement and support these applications. We really do take the time to understand your **business issues**.

Automating Solutions for Construction

For builders the "three P's"—process, productivity, and profitability — the hallmark of professional management—are critically important.

ProStrategy are delivering Microsoft software platforms to builders and contractors that simplify and automate their business processes.

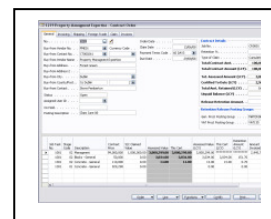

Labour, materials and resources are managed using predetermined business rules. Purchase contract orders and cost commitments are managed, while staged payment are routed to the QS or project managers for approval. Automating these critical processes means more time spent on value-added services, directly contributing to increased performance and improved decision making.

ProStrategy's Microsoft's Dynamics NAV enables you to

- Manage projects and contracts effectively
- Streamline internal communications
- Enable mobile solutions
- Automate office operations
- Integrate business operations
- Streamline the supply chain

Improving analytical functions across all areas of your business creates the ability to anticipate outcomes, monitor trends, and view the impact of change orders. Revenues and expenses can be tracked from initial budget through project closure, without waiting for accounting periods to close.

Construction companies must work constantly on process improvement in every part of the business. Builders who invest in information technology (IT) are executing projects more efficiently and delivering a higher quality product.

As members of CIF will be aware, the 2006 Construction Regulations was recently amended due to a shortage of trainers for certain FAS CSCS programmes [more](#)

Mission Critical quality management decision

The pressure on business professionals to build efficient, competitive, performance-driven organisations increases year by year. BI (Business Intelligence) solutions help finance professionals, managers and executives to make more informed decisions by unlocking the value of existing data, held in disparate data sources, and
