

PowerPlay Client - End User Course

Series 7 Version 3 PowerPlay Exploration and Report Building:

2 – day (€1,150 per delegate)

This is a 2-day instructor-led course that provides participants with the skills needed to analyse business data and create reports in PowerPlay. Fundamental Business Intelligence topics are covered, along with the technical skills required to successfully explore PowerCube data in PowerPlay and to apply these techniques to create professional reports. To analyse their data, participants will learn how to drill through cube data, replace categories and measures in a cross-tab, change the display to view the data in one of several graphical formats, format each display to enhance their analysis, sort, rank, and filter data, and create calculations. To create reports, participants will learn how to build a report cross-tab, perform and add calculations, use advanced nesting functions, create subsets, and automate and distribute reports.

PowerPlay - Administration Course

Series 7 Version 3 PowerPlay Transformer OLAP Modelling:

3 – days (€2,160 per delegate)

This 3-day course teaches students how to use Transformer to create PowerCubes for PowerPlay. The course starts with the design and creation of simple applications becoming more complex as the course progresses. Deployment, performance and security are also part of the course.
